

NORMAL OPERATION

This chart depicts the normal execution flow of the program. This is the "main" diagram as it showcases exactly what happens when a user attempts to authenticate themselves.

For the execution flow of an instance of a forgotten password or change of details, please see the other respective diagrams in this folder.

The flow is fairly simple but it doesn't take into account much error handling. Therefore, this diagram is not immutable and is only a rough sketch of the execution process.
